
(a) Sample paths ($q = 0.95$, $\sigma = 0.04$)
Deterministic
Stochastic path
Infectious (thousands)
Time (weeks)
(b) Peak distribution ($n = 400$, fade-outs 26)
Det. 16.9k
Mean 27.2k
Count
Peak infections (thousands)
(c) Variability versus noise
Deterministic
Peak infections (thousands)
Noise intensity σ
